

My target market is adults and homeowners. I am creating a website for Honey~Dos home improvements. This company does beautiful work, but is very un-organized. So I am designing an application that will help schedule their appointments and file companies contracts.

The content of the website will have a home page describing the different services. It will also have a contact us page with a drop down menu for leaving contact information. There will also be a about us page, a blog page and a organizer application.
